

Bird Diverter

Drone and Hotstick Deployable Clamp Attaches to 0.25 - 1.7" Cables

Bombproof swinging attachment catches eye of birds without failure risk

Reflector Reviewed & Improved by Leading Collision Biologists

Comes with Reflective or Glow-in-the-Dark Pattern

Pitch Aeronautics has leveraged feedback from biologists, utilities, and power line engineering firms to create a drone-deployable bird diverter (left). This diverter uses a **high contrast pattern optimized for bird vision in the low-light conditions** that collisions occur. This diverter is aerodynamically tuned to rock back and forth in the wind. This motion **increases visibility with a simple robust mechanism**.

The diverter only requires 150g (1/3 lb) of force to actuate, making it **easy to install** on all types of cables.

Our diverters can come installed!

Our drone Astria can perform precision touch-based installations, maintenance, and inspections. This allows safer and faster installation of bird diverters and other components. **We have already demonstrated energized installations with Astria.** Astria can install 15 bird diverters in a single flight.

Bird Diverter Testing Partner

Pitch Aeronautics is seeking early adopters to perform extended outdoor testing of our bird diverters. **Early adopters will receive a significant discount and additional warranty support.** We can provide a hot stick attachment for utility installation. In certain locations, we can provide drone installations. Sample pricing for early adopters is provided below. Pitch Aeronautics can provide an exact quote following consultation on the project.

Quantity	Discounted Price	Discounted Price w/ Drone Installation
2,000+	\$45	\$70
1000+	\$49	\$75
500+	\$54	\$90

Pitch Aeronautics' drone Astria can install 15 diverters in a single flight!
